INTERNSHIP COMPLETION CERTIFICATE

This is to certify that Mr/Ms. **Maji Sima Nirmal**, a student **BCA, Semester VI at Sardar Patel College of Administration and Management, SPEC Campus, Bakrol** has successfully completed the **Internship Program under the New Education Policy (NEP) 2020 at Techno Guide Infosoft Pvt. Ltd.** during the period **29/10/2025 to 18/11/2025**.

During the internship, the student has actively participated in various practical activities and gained valuable insights into the functioning of the organisation. The student has prepared an **Internship Report** based on the learning outcomes and experience acquired during the internship period, as a part of the academic requirement for the degree program.

We appreciate the student's sincere efforts and wish her success in all future endeavours.

Sardar Patel College of Administration and Management, Bakrol

PREFACE

Practical knowledge plays a vital role in strengthening theoretical understanding and developing professional skills. As a part of the academic curriculum under the **New Education Policy (NEP) – 2020**, internship training has been introduced to provide students with real-world exposure and practical experience in a professional environment.

I had the opportunity to undergo my internship at **Techno Guide Infosoft Pvt. Ltd.**, where I was able to observe and understand the day-to-day business operations of the organisation. This internship helped me gain practical knowledge related to organisational structure, work processes, and business practices. It also enabled me to understand how theoretical concepts learned during my academic studies are applied in real-life situations.

The preparation of this internship report is based on my observations, learning, and experience gained during the internship period. This report reflects my understanding of the organisation, its functioning, and the knowledge acquired during the training.

I sincerely hope that this report will fulfil the academic requirements and provide meaningful insight into the learning outcomes of my internship experience.

Maji Sima Nirmal

BCA Semester VI

Sardar Patel College of Administration and Management, SPEC Campus, Bakrol.

ACKNOWLEDGEMENT

I express my sincere gratitude to **Sardar Patel College of Administration and Management, Bakrol and Sardar Patel University** for providing me the opportunity to undergo an internship under the New Education Policy (NEP) 2020. This internship has provided me with valuable practical exposure and an opportunity to apply my academic knowledge in a real organizational environment.

I am deeply thankful to my **Principal, Dr. Suyog Upasani Sir**, for his constant encouragement and valuable guidance throughout the internship period. His motivation has been a great source of inspiration in the successful completion of this project.

I would like to express my sincere gratitude to the **IQAC Coordinator, Dr. Kalpesh Gohil Sir** for his continuous support and encouragement, which contributed significantly to the successful completion of this internship.

I would also like to extend my heartfelt thanks to the **HoD of BCA, Dr. Mehul Patel Sir**, for her valuable guidance, encouragement, and support throughout this internship.

I would also like to express my sincere gratitude to my faculty mentor/guide, **Shakshi Bhavsar**, for his continuous guidance, valuable suggestions, and support during the preparation of this project report.

I would also like to convey my sincere gratitude to the management and staff of **Techno Guide Infosoft Pvt. Ltd.**, especially **HR, Kaushal Vaghela** for providing me the opportunity to work as an intern and for their cooperation and assistance throughout my internship period.

I would like to sincerely acknowledge the **Internship Coordinator, Ms. Vibhuti Bhoi**, and **Internship Member Mr. Hiren Darji** for their dedicated coordination, constant support, and valuable guidance, which greatly facilitated the smooth completion of my internship.

My sincere gratitude goes to my parents and family members, for their moral support, patience, and encouragement, which have been my greatest strength throughout this journey.

Lastly, I extend my appreciation to all my friends and well-wishers, especially my father **Nirmal Maji**, who directly or indirectly helped me in the successful completion of this internship project.

DECLARATION

I, the undersigned, **Maji Sima Nirmal**, student of **BCA ,Semester VI** at **Sardar Patel College of Administration and Management, SPEC Campus, Bakrol** hereby declare that the internship project carried out at **Techno Guide Infosoft Pvt. Ltd.** is the result of my own work completed during my **Internship under the New Education Policy (NEP) – 2020**.

I further declare that this project is an original work and has not been submitted, in whole or in part, for any other degree, diploma, or certificate at any other institution. All sources of information and references used in this project have been duly acknowledged.

I also affirm that the project work has been completed under the guidance and supervision of **Shakshi Bhavsar** as part of my internship program.

I take full responsibility for the authenticity of the contents and data presented in this report.

Subject - Letter of Intent to be a Skill Knowledge Provider.

Dear Sir

1. **TechnoGuide Infosoft Pvt Ltd** is desirous to become a Skill Knowledge Partner of Sardar Patel University, V V Nagar and providing internship opportunity to students of BCA.
2. We would be providing internship opportunity to **Maji Sima Nirmal** in the area of Web development.
3. We understand that the course is commencing on **29/10/2025** and will be for the duration of **21 days** in the academic year 2025-26 divided into VI semesters,
4. As an organization, we shall provide opportunity to the students towards achieving the desirous learning outcomes. We understand that the minimum number of Days the student needs to spend on the learning outcome would be 21 Days per semester.
5. We shall share the Completion letter with the names of the student and course, once the batch is finalized

Your Sincerely,

TechnoGuide Infosoft Pvt. Ltd.,

Internship Supervisor's Name: Kushal Vaghela

Supervisor's Signature (with Seal):

INTRODUCTION

This internship report offers a comprehensive account of the practical training and professional exposure acquired at Technoguide Infosoft Pvt. Ltd. during the period from 29th October 2025 to 18th November 2025. The internship programme was thoughtfully structured to deliver hands-on experience in the domain of web development, encompassing both frontend and backend technologies, alongside creative design principles and deployment methodologies. The primary aim of this training was to effectively bridge the gap between theoretical academic knowledge and its practical application in a real-world industry environment.

Under the able leadership of CEO Moulik Shah, the organisation upholds a well-structured, disciplined, and nurturing learning environment. Over the course of the internship period, dedicated coordinators diligently supervised day-to-day tasks, facilitated regular review meetings, and offered personalised guidance to each intern, ensuring consistent progress, continuous improvement, and overall professional growth. This thoroughly organised and systematic approach played a significant role in building technical confidence and fostering a deeper understanding of industry-level development standards and best practices.

Over the course of the internship, I had the opportunity to work on a diverse range of practical assignments, which included Bootstrap-based website development, multi-page frontend design, backend database connectivity, CRUD operations using Python, user authentication systems encompassing Sign-Up, Sign-In, and Admin Panel functionalities, API integration for a real-time Weather Application, GitHub version control and live website deployment, as well as creative poster designing using Canva. These varied and engaging tasks collectively provided thorough exposure to UI/UX design principles, backend logic implementation, real-time data handling techniques, and live project hosting practices.

The internship proved to be a holistic learning experience that not only strengthened my technical skills but also significantly improved my problem-solving abilities, code structuring practices, documentation skills, and overall understanding of professional workflow and industry standards. In essence, this training programme served as a solid and reliable foundation for my aspiring career in web development, equipping me with valuable industry experience and practical knowledge that will undoubtedly prove beneficial in my future professional endeavours.

OBJECTIVES OF INTERNSHIP

The primary objectives of the internship at Technoguide Infosoft Pvt. Ltd. were thoughtfully designed to offer meaningful industry exposure and to reinforce both technical proficiency and professional competence. The key objectives are outlined as follows:

- 1. To Acquire Practical Knowledge of Web Development**
- 2. To Strengthen Frontend Development Skills**
- 3. To Gain an In-Depth Understanding of Backend Functionality**
- 4. To Develop Proficiency in API Integration**
- 5. To Master Version Control and Deployment Practices**
- 6. To Enhance Creative and Design Capabilities**
- 7. To Refine Professional and Communication Skills**
- 8. To Develop a Thorough Understanding of Industry Workflow**

On the whole, the internship was aimed at effectively bridging the gap between academic learning and real-world industry requirements, while simultaneously laying a strong and well-rounded technical and professional foundation for future career growth.

DAY-WISE LEARNING OUTCOMES

29 October 2025

Task: Learning Bootstrap | Time: 9:30 AM to 1:50 PM | Duration: 4 Hours 20 Minutes

Status: Completed

My internship at Technoguide Infosoft Pvt. Ltd. commenced on 29th October 2025, and the very first day offered a clear and comprehensive introduction to the company's work culture, professional expectations, and overall learning environment. Under the able leadership of CEO Mr. Moulik Shah, the organisation maintains a disciplined yet warm and friendly atmosphere that is highly conducive to learning and growth. A dedicated team of four female coordinators was assigned to oversee, manage, and guide the interns throughout the day. Their encouraging and supportive demeanour, clear and effective communication, and constant availability to address doubts and queries made the initial phase of the internship remarkably smooth and comfortable.

On this day, I understand my learning journey with Bootstrap, a widely adopted and essential frontend framework that forms the backbone of modern web development. I further consolidated this knowledge by practising the creation of small layouts and experimenting with various components, which considerably boosted my confidence in UI development.

Overall, the first day enabled me to adapt swiftly to the company's professional workflow and provided valuable clarity on how frontend technologies are utilised and implemented in real-world industry settings. The foundational knowledge of Bootstrap acquired on this day proved instrumental in shaping my approach to the subsequent tasks and projects that I undertook and successfully completed throughout the remainder of the internship.

30 October 2025

Task: Creating Home Page of E-commerce Using Bootstrap | Time: 9:30 AM to 1:50 PM |
Duration: 4 Hours 20 Minutes

Status: Completed

My second day at Technoguide Infosoft Pvt. Ltd. was much more fun and hands-on compared to the first day. I actually got to use the Bootstrap stuff I had learned the day before, which felt really good. The office vibe was still positive and everything was well-managed.

There was a team of four female coordinators who were specifically there to guide us interns, and honestly they were amazing. They kept checking on us throughout the day, gave us clear instructions, answered our questions whenever we got stuck, and made sure nobody was left behind or confused. What I really liked about them was that they were friendly and approachable but also kept things disciplined and on track. Because of them, the whole environment felt comfortable to learn in and I could stay focused without feeling stressed or lost.

The main thing I had to do that day was build a full homepage from scratch using Bootstrap 5. It wasn't just about writing code — I also had to think about how the page should look, how it should be structured, and how someone using it would actually feel while browsing through it.

I started by figuring out what sections the homepage would need, and then built them one by one. Using Bootstrap's grid system, I created a navigation bar, a hero banner, some content cards, and a few featured

sections — and the best part was that everything automatically adjusted to different screen sizes, which is basically what responsive design is all about.

I also played around with Bootstrap's utility classes to get the spacing right, align things properly, pick the right fonts and text styles, and try out different colour combinations to make the page look clean and professional.

While building the page, I also got into some of the more advanced Bootstrap stuff like carousels, responsive images, and interactive elements that make a webpage look modern and eye-catching. Working with these things gave me a real sense of how frontend developers actually build the kind of websites we see every day.

As I kept moving forward, the coordinators would come over from time to time to check what I had done. They gave me useful suggestions and helped me out whenever I got stuck — especially with things like getting the layout to align properly or making sure the page looked good on different screen sizes. Their feedback made a noticeable difference in how my work turned out, and it also made me realize how important it is to write code that is clean, organized, and easy to understand.

By the time the day wrapped up, I had managed to build a complete homepage that was fully responsive and looked genuinely professional. It felt really satisfying to see it all come together. That one task did a lot for my confidence in frontend development and gave me a much clearer picture of how UI design actually works in the real world.

It also helped me get better at taking a design idea in my head and actually turning it into a working webpage — which is something that sounds simple but takes a bit of practice to get right.

Looking back, completing that homepage turned out to be really important because it gave me a strong base to work from. Everything more complex that I built later during the internship — the bigger pages, the trickier components — felt a lot more manageable because of what I had learned and practiced that day.

31 October 2025

Task: Product Page & Contact Us Page (Frontend) | Time: 9:30 AM to 1:50 PM | Duration: 4 Hours 20 Minutes

Status: Completed

The third day of my internship at Technoguide Infosoft Pvt. Ltd. fell on 31st October 2025, and I continued working on the website by building two important sections — the **Product Page** and the **Contact Page**. Since my website is based on a clothing brand that sells sarees, dresses, and lehengas, these two pages were really important in shaping the overall look and feel of the site.

×

[Continue Shopping](#)

After completing the Product Page, I moved on to building the **Contact Us** page. But before jumping straight into the contact form and details, I first added an **About Us** section at the top of the page. This section gave a brief introduction about the website owner — who they are, what their brand stands for, and the story behind the clothing collection featuring sarees, dresses, and lehenga. It gave the website a more personal and trustworthy feel, as visitors could get to know the person behind the brand before reaching out to them.

Once I was mostly done with the About Page, I shifted my attention to building the Contact Page. This one was a bit different because it wasn't just about making things look good — I also had to think about how easy and comfortable it would be for someone to actually use the form.

I built a responsive contact form using Bootstrap, with fields like name, email, message, and a few other necessary inputs. I also used Bootstrap's spacing utilities and container structure to make sure everything was properly aligned and easy to read — because a cluttered form can be really off-putting for users.

The image shows a web browser window with the address bar displaying '127.0.0.1:8000/contact/'. The page has a light pink background. At the top, the heading 'GET IN TOUCH' is centered in a bold, black, serif font. Below it, a line of text reads: 'Have a question, need help, or want to book an appointment? We'd love to hear from you!'. The form itself is a white rectangular box with a thin orange border. It contains five input fields: 'Full Name' (placeholder: 'Enter your full name'), 'Email Address' (placeholder: 'Enter your email'), 'Phone Number' (placeholder: 'Enter your phone number'), 'Address' (placeholder: 'Enter your address'), and a larger text area for 'Your Message' (placeholder: 'Write your message...'). A dark grey 'Send Message' button is positioned at the bottom center of the form.

Throughout the day, the coordinators were really easy to approach and made sure every intern was keeping up with their work. The feedback they gave me during this task helped me improve my pages and also made me think more deeply about how each page on a website serves a different purpose — like how a Product Page drives interest, an About Us to builds trust, and a Contact Section opens up communication with the user.

Working in such a well-structured environment made a real difference. And knowing that everything was being overseen by the CEO, Mr. Moulik Shah, gave the whole internship a more professional and serious feel. His leadership reflected in the way the entire team functioned — organized, focused, and genuinely invested in helping us grow. Slowly but steadily, I could feel myself getting more confident and capable in frontend development with each passing day.

By the time the day wrapped up, I had successfully completed the Contact Page. It was a productive day that really deepened my understanding of how multi-page websites are built and why maintaining a consistent look and feel across all pages matters so much. I also got a much better sense of how important it is to keep the page structure clean and organized. On top of that, this day kind of prepared me for what was coming next — the backend integration tasks that I would be handling later during the internship.

01 November 2025

Task: Holiday | Time: — | Duration: — | Status: —

1st November 2025 was a holiday at Technoguide Infosoft Pvt. Ltd., so there was no official work for the day. But honestly, the break came at just the right time. After three back to back days of learning and building things, it gave me a chance to slow down, go over the concepts I had picked up so far, and actually let everything sink in properly. I also took some time to reflect on how the company works and how the whole workflow was structured. So even though it was a non-working day, it still felt like a useful and needed part of the internship journey.

Even though the office was closed, the motivation I had built up over the first three days didn't really go anywhere. The four female coordinators had already set such a good learning pace for us that staying consistent felt natural even on a day off. The way they had guided and supported us throughout the week genuinely encouraged me to keep that momentum going. And reflecting on the overall experience, I could see how the professional attitude of CEO Mr. Moulik Shah and the structured approach of the internship was teaching me something beyond just coding — it was showing me how important it is to find the right balance between learning, practicing, and giving yourself time to rest, which is something that matters just as much in a real work environment.

So overall, even though 1st November was a holiday, it didn't really feel like a wasted day. It served as a good opportunity to revise what I had learned and mentally prepare myself for the more technical tasks that were coming up in the week ahead.

Task: Holiday | Time: — | Duration: — | Status: —

2nd November 2025 was another holiday at Technoguide Infosoft Pvt. Ltd., making it the second non-working day in a row. There were no official tasks or assignments for the day, but that didn't mean it was unproductive. Since I had already finished quite a few foundational frontend tasks in the days before, this break was actually a good chance to clear my head, recharge, and get mentally ready for the more challenging technical work that was lined up for the coming week.

During the day off, I spent some time going back through the Bootstrap concepts I had learned and revisited the code I had written for the Home, About, and Contact pages. Reading through my own code again was actually really helpful — it made me more aware of how professional developers keep their code clean, well-structured, and easy to reuse. I also found myself thinking back on all the feedback and guidance the four female coordinators had given me during the working days. Their instructions had genuinely built up my confidence and given me a lot of clarity, and even on a holiday, that motivation stayed with me and kept me in the right headspace to keep moving forward.

Overall, 2nd November was a quiet but genuinely productive day. The revision and reflection it offered kept me in the right mindset and made sure I was well prepared for what was coming next — the more complex and hands-on tasks involving backend integration and advanced project development.

03 November 2025

Task: Learning Database Connectivity | Time: 9:30 AM to 1:50 PM | Duration: 4 Hour 20 Minutes

Status: Completed

On 3rd November 2025, I was back at Technoguide Infosoft Pvt. Ltd. after the holiday break, and this day marked a pretty exciting shift — we were moving from frontend development into backend concepts. After a couple of days off, the whole environment felt fresh and energetic, and all the interns came back with a renewed focus and enthusiasm to learn. The four female coordinators were right there as always, actively guiding us and making sure that everyone transitioned smoothly into this new phase of the internship without feeling overwhelmed or lost.

The main focus for the day was understanding and testing database connectivity, which was a pretty big and exciting step because it was my first real introduction to how data is actually stored, retrieved, and managed in real-world applications. I started exploring how Python interacts with databases and how connections are set up using the right configurations. The coordinators took time to explain why handling these connections securely and efficiently matters so much, and that really opened my eyes to how important a reliable backend is for any modern web application — because no matter how good the frontend looks, if the backend isn't solid, the whole thing falls apart.

During the practical session, I worked on actually establishing a connection with the database, checking whether the server was responding correctly, and running some basic operations to make sure the link between Python and the database was stable and working properly. Through this hands-on practice, I got familiar with concepts like drivers, connection parameters, and how to handle errors when a connection fails — things that sound technical but started making a lot of sense once I was actually working with them. The coordinators kept a close eye on our progress throughout, cleared up any doubts we had, and also emphasized the importance of writing backend code that is clean and easy to read, which is something I hadn't really thought about much on the frontend side.

Working under the leadership of CEO Mr. Moulik Shah and the well-structured internship program made the whole experience much easier to navigate. The company maintained a calm and learning-focused atmosphere where we were free to experiment, make mistakes, and figure things out without any pressure — which honestly makes a huge difference when you're learning something new. By the end of the day, I had successfully completed the database connectivity test, and that small win felt really good. It gave me the confidence and the push I needed to dive deeper into backend development in the days ahead

This day felt like a real turning point in my internship — I was no longer just designing how things look, but starting to understand what actually happens behind the scenes when a website works with real data. It was a solid foundation to build on, and it got me genuinely excited for what was coming next — the CRUD operations and user-related backend features that I would be diving into over the upcoming days.

04 November 2025

Task: CRUD Operations in basic Python | Time: 9:30 AM to 1:50 PM | Duration: 4 Hours 20 Minutes

Status: Completed

On 4th November 2025, my internship moved deeper into backend programming as I started working on CRUD operations using core Python. The task didn't take up the entire day, but it was honestly one of the more important milestones so far because CRUD — which stands for Create, Read, Update, and Delete — is basically the backbone of almost every application that deals with data in any way. The company environment was as structured and supportive as always, and the four female coordinators continued to guide us patiently and clearly through each new concept, making sure none of us felt lost as we stepped further into the backend side of development.

The session started with the coordinators walking us through how CRUD functionalities actually work at the backend level and why they are so essential for managing things like user data, product records, and other interactive features in web applications. With their guidance, I got into the practical side of things and started writing small Python modules that performed each of these operations — inserting new data into the database, retrieving stored records, updating existing entries, and deleting items that were no longer needed. Working through these exercises really helped me understand how logical operations connect with the database layer and how Python communicates with data that is stored on the server side — which honestly made the whole backend picture a lot clearer for me.

This task also taught me something beyond just the technical side — it made me more conscious of writing code that is clean, simple, and easy to maintain. Even though it was a relatively short session, it gave me a much deeper appreciation for how backend logic is really the core of any functional website or application — the part that makes everything actually work. The coordinators reviewed what I had written, gave me constructive feedback, and kept reminding me to focus on accuracy, clear syntax, and making sure my code

ran without errors. Their constant support and encouragement made what could have been an intimidating topic feel completely manageable and genuinely interesting.

Even though the task didn't take up much time, the learning that came out of it was really meaningful and gave me a solid foundation to build on — because almost everything in backend development that was coming up next would rely heavily on these very same CRUD operations.

05 November 2025

Task: Admin Panel, Login, SignUp, SingIn, Forget Password | Time: 9:30 AM to 1:50 AM |
Duration: 4 Hours 20 Minutes

Status: Completed

On 5th November 2025, the internship stepped into a more advanced and exciting phase as I started working on some really important backend features — the admin panel, user sign up, sign in, and the forgot password system. It was honestly one of the most interesting days so far because it gave me a real look at how user authentication actually works in live applications — something I had always wondered about as a user myself but never really understood from the technical side. The work environment remained as disciplined and motivating as ever, and the overall direction and leadership of CEO Mr. Moulik Shah continued to reflect in how professionally. and smoothly everything was structured and managed.

Throughout the day, the four female coordinators who were responsible for managing the interns provided continuous guidance. They explained the concept of authentication flows, the structure of admin panels, and how user credentials are stored securely in the database. With their help, I implemented the signup and signin systems using Python and database integration.

A screenshot of a 'Create account' form. The form is white with rounded corners and is centered on a light blue background. It contains four input fields: 'Name / Username', 'Email', 'Password', and 'Confirm Password'. Below these fields is a red 'Sign Up' button. At the bottom, there is a link that says 'Already have an account? [Login here](#)'.

I also got to learn how the forgot password mechanism works, which was really interesting because as a regular internet user I had used this feature countless times but never understood what actually happens behind the scenes. The process started with validating whether the email or username entered by the user genuinely exists in the database or not. After that, the system checks the user's data against stored records to confirm their identity before allowing any changes to be made. Once verified, the user is guided through a secure reset process where they can safely set a new password for their account. The coordinators explained each step in detail and made it very clear why proper validation and security at every stage is absolutely essential when it comes to protecting user accounts and sensitive information.

A screenshot of a 'Reset Password' form. The form is white with rounded corners and is centered on a light blue background. It contains two input fields: 'Enter Username' and 'Enter New Password'. Below these fields is a red 'Change Password' button. At the bottom, there is a green link that says 'Back to Login'.

One thing that really stood out about this internship was that the team regularly held short review meetings during working hours. These weren't long or formal — they were quick, focused check-ins designed to see how each of us was progressing, understand what challenges we were facing, and make sure everyone was moving in the right direction. On top of these group meetings, the coordinators also personally came over to review my work individually, pointed out areas where I could do better, and gave me suggestions that felt

genuinely professional and practical. This one on one interaction was something I really valued because it helped me identify my own strengths and weaknesses clearly, and the best part was that I could correct my mistakes right then and there instead of carrying them forward.

As the day went on, I started realizing more and more how important it is to maintain clean coding practices, handle errors properly, and make sure every feature works perfectly — not just from the user's side but from the admin's side as well. It's easy to get caught up in just making something work, but the coordinators kept pushing me to focus on accuracy and logical flow, which genuinely elevated the quality of my code. Their feedback was always constructive and to the point, and their consistent monitoring throughout the day made even the more complex tasks feel much easier to understand and complete. It was the kind of supportive environment where you actually want to do better.

By the end of the day, I had successfully implemented the admin panel along with all the user authentication features including sign up, sign in, and the forgot password system. It felt really rewarding to see everything working together properly. This was honestly one of the most skill-building days of the internship so far — it significantly strengthened my backend development abilities and gave me a much clearer picture of how professional web applications manage their users and control who has access to what parts of the system.

06 November 2025

Task: Mainly Update (Database Also) | Time: 9:30 AM to 1:50 AM | Duration: 4 Hour 20 Minutes

Status: Completed

#	Username	Email	Date Joined	Actions
1	admin	admin12@gmail.com	02 Nov, 2025	Edit Delete

On 6th November 2025, I continued my internship at Technoguide Infosoft Pvt. Ltd. with a focus on backend functionality — specifically working on updating user and contact information and making sure that all changes were correctly saved and reflected in the database. It was an important and practical task because it showed me how dynamic user data is actually managed in real web applications, where information is constantly being added, changed, and updated by users. The work environment remained as professional, organized, and supportive as ever, and the overall leadership of CEO Mr. Moulik Shah continued to reflect in the structured and focused way everything was run throughout the day.

The main task for the day was building a feature that allowed user details to be updated through a form and saved securely in the database. The process involved several steps — first retrieving the existing user information from the database, then displaying it in editable fields so the user could make changes, validating the updated data to make sure everything was correct, and finally submitting those changes so they could be properly saved. Working through all of this taught me how update queries actually work, why maintaining database integrity matters so much, and how important it is to make sure the backend logic runs without any errors. It also deepened my understanding of CRUD operations, especially the Update part, which I now realize plays a really significant role in things like user profile management systems that we interact with on almost every website we use daily.

The four female coordinators were as actively involved as ever throughout the day, regularly checking on our progress, clearing up any doubts we had, and making sure all of us were implementing the logic in the right way. One thing that I genuinely appreciate about this internship program is that the coordinators frequently arrange short review meetings during working hours. These internal meetings are really effective because they keep all the interns aligned with what needs to be done for the day and create the perfect opportunity to clear up any confusion before it snowballs into a bigger problem. It's a simple practice but it makes a huge difference in how smoothly and confidently everyone works throughout the day.

Beyond the group meetings, the coordinators also gave personal attention to each intern's work individually. They reviewed my code one on one, pointed out logical errors, suggested better ways to write certain functions, and guided me towards cleaner and more efficient backend code. What I really appreciated was that they didn't just point out what was wrong — they also explained why it was wrong and how to fix it properly, which made the learning so much more effective. Their consistent involvement throughout the day kept everyone working at a professional pace, and honestly their personal feedback motivated me to keep refining my work and push for better accuracy with every task I completed.

By the end of the day, I had successfully completed the user update functionality and everything was reflecting accurately in the database just as expected. It was a satisfying task that really strengthened my backend foundation and taught me how important reliable data handling is in any professional application. It also felt like a good stepping stone for the more complex work — including e-commerce interfaces and advanced modules — that was coming up in the days ahead.

07 November 2025

Task: E-commerce Home Page Using Bootstrap 5 | Time: 9:30 AM to 1:50 PM | Duration: 4 Hours 20 Minutes

Status: Completed

On 7th November 2025, my internship training at Technoguide Infosoft Pvt. Ltd. moved into a deeper and more exciting phase of frontend development. The focus of the day was on creating the main homepage layout for an e-commerce platform using Bootstrap 5, which gave me a really good understanding of how modern online shopping interfaces are structured and designed in a professional environment. It was a task that required both creativity and technical accuracy at the same time — because the homepage is essentially the first impression a user gets when they visit an e-commerce site, and getting that first impression right is absolutely crucial for keeping the user engaged.

I worked on building a polished and well structured layout that included all the key sections a good e-commerce homepage needs — a hero banner for promotions, a clean navigation menu, featured product sections, category cards, and responsive grid structures. Throughout the process I got a much deeper understanding of how Bootstrap's utility classes, grid system, and responsive breakpoints work together to maintain a consistent and visually appealing design across all device sizes. It was really interesting to see how the same layout automatically adjusted and looked great on desktops, tablets, and mobile devices, which is exactly what companies need when they want their websites to reach and work well for every type of user.

The work environment continued to be positive, organized, and efficient under the leadership of CEO Mr. Moulik Shah. The coordinators made sure we were following industry level coding practices throughout the day, paying close attention to things like layout structure, spacing, typography balance, and component alignment. Their sharp focus on these details really helped me understand how seriously UI/UX consistency is taken in real world projects — because even the smallest misalignment or spacing issue can affect how professional and trustworthy a website feels to its users.

Apart from the group interactions, the coordinators also personally reviewed my layout and gave me specific feedback on areas that needed improvement. They pointed out where spacing could be better, suggested cleaner card structures for displaying Amul's products like dairy items, butter, cheese, and ice cream, and guided me on refining the responsive behavior for smaller screens so the layout looked just as good on mobile as it did on desktop. Their consistent involvement and encouragement throughout the day made the learning environment feel comfortable, focused, and highly productive.

By the end of the day, I had successfully completed a professional, structured, and fully responsive homepage design for the Dairy Product themed e-commerce platform. It was a really satisfying task that significantly strengthened my frontend development skills, deepened my understanding of Bootstrap components, and gave me a much closer look at how commercial e-commerce interfaces are actually planned and built in the industry.

Task: Holiday | Time: — | Duration: — | Status: —

On 8th November 2025, the internship day at Technoguide Infosoft Pvt. Ltd. was officially marked as a holiday. Even though it was a non-working day, the momentum built up from the previous sessions was strong enough to keep me reflective and engaged. I found myself naturally thinking back on the progress I had made so far and how much had been covered in such a short span of time. The work environment throughout the internship had been so structured, disciplined, and motivating that even on a day off the learning mindset didn't really switch off — and that, I think, is a true sign of how effective the guidance and training during the working days had been.

The consistent involvement of the four female coordinators throughout the internship had played a huge role in building my understanding of the development process. Their regular code reviews, doubt clearing sessions, and progress discussions had always kept me aligned with the company's goals and aware of exactly where I stood in my learning journey. Because of how well structured and clearly planned the workflow was, staying focused even on a holiday felt natural — the clarity they had provided during the working days carried over and kept the learning mindset going even on days when there was no official work.

Overall, the holiday struck a good balance between rest and reflection, and by the end of it I felt genuinely refreshed and ready to return to the next working day with renewed focus and a clearer mindset for the tasks that lay ahead.

Task: Holiday | Time: — | Duration: — | Status: —

On 9th November 2025, the internship day at Technoguide Infosoft Pvt. Ltd. was observed as a holiday with no official tasks or activities scheduled. But even on a day off, the learning didn't really stop. The break gave me a good opportunity to mentally revise and reflect on everything covered in the earlier sessions. What I appreciated about the internship was that it had been structured in such a clear and disciplined way that learning continued naturally even outside of working hours — the concepts and workflows from the active days stayed with me and kept me engaged even during the rest days.

A big part of why the learning felt so continuous was the supportive environment created by the four female coordinators. Their consistent guidance, step by step supervision, and personalized feedback throughout the internship had helped build a really strong technical foundation in me. Because of their regular review meetings and one on one progress checks, I always had a clear sense of where I stood — what I had accomplished and what still needed improvement. That kind of structured and attentive approach made the entire learning journey flow smoothly, and honestly even on a holiday that clarity and motivation stayed with me.

Although no active coding took place on this day, the holiday served as a valuable and well timed pause that allowed me to return the next day feeling refreshed, refocused, and fully ready for the next phase of development work.

10 November 2025

Task: Weather App Interface | Time: 9:30 AM to 1:50 AM | Duration: 4 Hour 20 Minutes

Status: Completed

On 10th November 2025, my internship work at Technoguide Infosoft Pvt. Ltd. shifted towards something really interesting — designing the user interface for a Weather Application. It was a great opportunity to put my frontend development skills to use while also thinking about how a functional application needs to balance clean design with smooth and easy interaction for the user. I worked on building a clear and visually appealing layout that included a search bar where users could look up any location, a temperature display section, weather icons to make the information more visual and intuitive, and additional details like humidity and pressure. The goal was to make sure the interface looked good but also felt simple and easy to navigate for anyone using it

The professional environment under the leadership of CEO Mr. Moulik Shah continued to keep all of us interns motivated and focused throughout the day. This task was also a really good hands-on introduction to UI/UX principles — things like spacing, alignment, readability, and making sure the layout behaves responsively across different screen sizes. I learned how to structure components in a way that feels natural and smooth for the user, which is especially important in real-time applications like a weather app where the information needs to be displayed clearly and instantly without any confusion.

Throughout the session, the four female coordinators supervised our progress with the same dedication as always, checking our layouts, correcting design mistakes, and guiding us on better placement of elements for improved usability. As part of the company's structured training approach, small review meetings were also arranged during the session, which helped us understand how a weather app is expected to look and function in a professional setting.

Along with the group guidance, the coordinators also reviewed my work individually and pointed out specific improvements related to typography balance, icon placement, and container spacing. Their personalized feedback made a noticeable difference in how polished and professional my design looked by the end. What I found most valuable was that they didn't just tell me what to change — they explained why each design choice matters, which helped me think more critically about every decision I made on the interface.

By the end of the session, I had successfully completed the weather app interface with a clean and responsive structure that was ready for API integration. It was a rewarding task that genuinely enhanced my frontend skills and gave me practical experience in designing real-world application interfaces.

11 November 2025

Task: Weather App API Connectivity | Time: 9:30 AM to 1:50 AM | Duration: 4 Hour 20 Minutes

Status: Completed

On 11th November 2025, my internship work at Technoguide Infosoft Pvt. Ltd. focused on implementing full API connectivity for the Weather Application, and honestly it turned out to be one of the most insightful sessions of the entire internship so far. It was my first real experience with live data handling — actually connecting the interface I had built to a real weather API and seeing live information flow into the application in real time. The session went beyond just basic temperature readings and pushed me into exploring more advanced API features that are commonly used in professional applications, which made it feel like a genuinely industry-level learning experience.

During the session I successfully implemented several advanced features using the API that really transformed the application into something much more complete and useful. I added the ability to switch between Fahrenheit and Celsius, and included detailed weather information like humidity, pressure, feels-like temperature, and descriptive weather conditions. On top of that I integrated daily weather updates along with a full 7-day forecast so users could see how the weather would change over the coming week for their selected location. I also added average day and night temperatures, sunrise and sunset times, and overall climate

conditions — which made the app feel far more detailed and professional compared to a basic weather interface. Working through all of this gave me a really clear understanding of how complex weather applications actually gather, process, and present live environmental data in a way that feels smooth and meaningful to the end user.

The well-organized environment under the leadership of CEO Mr. Moulik Shah continued to support effective learning throughout the day. Working with real-time data really improved my understanding of asynchronous JavaScript, JSON parsing, and how the UI updates dynamically based on live data. It also taught me how important clean code structure is when dealing with multiple API endpoints and complex datasets all at once.

Throughout the session, the four female coordinators provided continuous guidance, checking my progress, helping me identify errors in API handling, and explaining how to optimize the response structure for better performance. As part of the usual internship routine, short review meetings were also arranged during the day, which helped us understand best practices for working with APIs, proper error handling methods, and how to render UI updates efficiently without slowing down the application

Along with the group sessions, the coordinators also personally reviewed my code, suggested simpler ways to map data for the weekly forecast, and guided me on presenting all the information in a clean and readable format. Their feedback made a real difference in the final output, ensuring the weather app not only looked professional but also functioned smoothly without any issues.

By the end of the day, I had completed the full API integration along with all the advanced features, turning the weather app into a complete and fully functional forecasting tool. It was one of the most rewarding tasks of the internship so far and significantly improved my understanding of real-time data applications, API structures, and dynamic UI development — all of which are essential skills for building practical and modern web applications.

12 November 2025

Task: Learning use of GitHub & Website Deployment | **Time:** 9:30 AM to 1:50 AM | **Duration:** 4 Hour 20 Minutes

Status: Completed

On 12th November 2025, my internship at Technoguide Infosoft Pvt. Ltd. focused on something really essential and exciting — learning how to deploy a website using GitHub. This session stood out as one of the most important parts of the training because it showed me how a project that you have been building locally actually gets taken live and made accessible to the real world. Deployment is a critical step in the software development cycle that I had heard about but never actually experienced hands-on, so getting practical exposure to it really strengthened my understanding of how real-world development workflows come together from start to finish.

During this session, I deployed two complete projects:

1. Ecommerce Clothing Website
2. Weather Application

started by uploading both projects to separate GitHub repositories, making sure everything was clean and well organized from the start. Through this process I got hands-on practice with the core Git operations — initializing a repository, making commits, pushing code, resolving authentication issues, and maintaining a proper version history. It was really eye-opening because it helped me understand how developers manage multiple projects simultaneously and collaborate with each other efficiently through version control systems, which is something every professional developer relies on daily.

After that I moved into the actual deployment phase using GitHub Pages, which was where things got really hands-on and practical. I learned how GitHub hosts static websites, how the structure and hierarchy of your project folder affects the way it deploys, and how to troubleshoot common issues that come up during the process — things like missing files, incorrect folder paths, script loading failures, and branch configuration problems. What made this session even more valuable was that I deployed two different websites in a single session, which gave me a real feel for managing multiple live projects at the same time, very similar to how things work in an actual industry environment.

The work environment remained as structured and motivating as ever under the leadership of CEO Mr. Moulik Shah. The four female coordinators were actively involved throughout the session, monitoring each step of the deployment process, helping resolve Git-related errors, and making sure we understood the best practices

for managing repositories properly. As part of their usual training routine, short progress review meetings were also held during working hours, which helped clarify the overall deployment workflow, branch requirements, and how to maintain a clean and professional project structure — all things that are really important when working on live projects.

Along with the group guidance, I also received individual attention from the coordinators who reviewed both of my project repositories personally, suggested improvements in file placement, corrected index linking issues, and made sure all the live site components were working smoothly. Their hands-on involvement throughout the process made everything much easier to handle and really boosted my confidence when it came to deploying projects independently.

By the end of the session, both the **Ecommerce Clothing Website** and the **Weather Application** were successfully hosted online and fully live. It was a really satisfying moment to see projects I had built from scratch actually accessible on the internet. This task gave me strong practical experience in version control, managing multiple project deployments, and live hosting — skills that I now realize are absolutely crucial for any aspiring web developer working in a real industry environment.

13 November 2025

Task: Poster Designing on Canva | Time: 9:30 AM to 1:50 PM | Duration: 4 Hours 20 Minutes

Status: Completed

On 13th November 2025, my internship training at Technoguide Infosoft Pvt. Ltd. took a creative turn as the focus shifted to poster designing using Canva. It was a refreshing change of pace and introduced me to the fundamentals of digital design — things like layout structure, color combinations, typography, spacing, and alignment. I had always thought of design as something purely creative and instinctive, but this session showed me that there is actually a lot of thought and logic behind every good design decision, and how these elements together play a really important role in branding and user engagement in a real corporate environment.

Under the guidance of CEO Mr. Moulik Shah, the training atmosphere remained warm and supportive throughout the day. The four female coordinators supervised our work closely, reviewed our poster layouts, and guided us according to professional design standards. Short review meetings were also conducted during the session to check everyone's progress and correct any common design mistakes before they carried forward.

During the session I also received personal feedback from the coordinators who suggested specific improvements in font pairing, spacing, and overall visual balance of my posters. These small but impactful inputs made a noticeable difference in how my designs turned out and also gave me a lot more confidence when it came to handling creative tasks independently.

By the end of the session, I had completed multiple posters and gained solid hands-on experience with Canva's design tools. It was a great addition to the internship journey because it added a valuable creative dimension to what had otherwise been a very technical learning experience so far.

14 November 2025

Task: Poster Designing (Cookies, Coffee) | Time: 9:30 AM to 1:50 PM | Duration: 4 Hours
20 Minutes

Status: Completed

On 14th November 2025, my internship continued with another creative and enjoyable session of poster designing using Canva. This time I created three themed posters — Cookies and Coffee — with the main objective of practicing professional layout structuring, improving visual balance, and understanding how to use design elements effectively for promotional material. It was a fun yet focused task that pushed me to think more carefully about how good design can make a product look appealing and attractive to its target audience.

Throughout the session the coordinators guided us closely, conducting short review meetings to check our progress and giving feedback on each poster individually. They corrected alignment issues, suggested better font combinations, and also explained how color psychology works specifically in food related designs — for example how certain colors trigger hunger or make a product look more fresh and appealing. Their continuous feedback helped me refine each poster and keep the overall presentation clean, professional, and visually attractive.

By the end of the session, all three posters were completed with noticeably better precision and a much stronger understanding of design principles compared to the day before. It was a productive and satisfying creative day that strengthened my design skills and added another valuable layer of experience to my overall internship learning journey.

15 November 2025

Task: Holiday | Time: — | Duration: — | Status: —

On 15th November 2025, the company had a scheduled holiday so there were no official internship activities for the day. But rather than letting it go to waste, I used the time to rest and go back over the concepts covered in the previous sessions — including poster designing, API connectivity, and frontend development practices. It was a good opportunity to let everything sink in properly and mentally prepare for the tasks that were coming up ahead, helping me maintain a steady and consistent learning pace throughout the internship.

16 November 2025

Task: Holiday | Time: — | Duration: — | Status: —

On 16th November 2025, another scheduled holiday was observed at Technoguide Infosoft Pvt. Ltd. with no official internship activities for the day. I used the time to refresh and reflect on how far I had come since the start of the internship. I went back over some key topics like Bootstrap components, CRUD operations, and API handling, and the self revision really helped solidify my understanding of concepts that I wanted to feel more confident about. It was a quiet but useful day that kept me prepared and in the right headspace for the tasks coming up ahead.

17 November 2025

Task: Leave | Time: — | Duration: — | Status: —

On 17th November 2025, I was on leave due to personal reasons and could not attend the office. However, I made sure that all my previous tasks were fully completed and up to date before the leave so nothing was left hanging. The supportive and understanding environment at Technoguide Infosoft Pvt. Ltd. made it easy to manage the day off without it affecting my overall internship progress in any way. The break also gave me a chance to mentally reset and get ready for the final stages of the internship that were coming up ahead.

18 November 2025

Task: Report | Time: 9:30 AM to 1:50 AM | Duration: 4 Hours 20 Minutes

Status: Completed

On 18th November 2025, the focus of my internship work at Technoguide Infosoft Pvt. Ltd. shifted towards preparing a complete and well-structured report covering all the tasks, learnings, and progress made throughout the internship period. It was a really reflective and meaningful activity because it made me go back through everything I had worked on — from frontend development and backend implementation to creative poster designing and website deployment — and put it all together in one place. Writing it all out gave me a surprisingly clear picture of how much I had actually grown, both technically and professionally, over the course of the internship.

The work environment remained as organized and supportive as ever under the leadership of CEO Mr. Moulik Shah. One thing that really stood out about Technoguide Infosoft Pvt. Ltd. is that they make sure interns don't just complete tasks mechanically — they also emphasize the importance of documenting progress in a proper and professional format. This approach was really beneficial because it pushed me to work on my communication skills, particularly when it came to writing about technical content in a way that is clear, structured, and easy to understand.

Throughout the session the four coordinators continued their consistent and dedicated support, guiding us on how to structure the internship report properly, what information to highlight, and how to maintain clarity and accuracy throughout the document. Short review meetings were also conducted during the session to check whether everyone was documenting their work correctly and following a professional reporting style. These meetings were really effective because any mistakes were caught and corrected on the spot, and it also helped make sure that all the interns were maintaining a uniform and consistent format across their reports.

Along with the group guidance, the coordinators also took time to review my report individually, suggested specific formatting improvements, corrected technical descriptions wherever needed, and made sure the overall document met industry standards. Their personal review sessions made a real difference in the quality of my final report, helping me produce something that felt genuinely refined and professional rather than just a basic summary of tasks completed.

By the end of the session I had successfully completed the detailed internship report, and it felt like a really satisfying and fitting conclusion to everything I had worked on during the internship. The activity genuinely strengthened my ability to document technical tasks in a clear and professional manner — a skill that I now realize is just as valuable in a real world IT environment as the technical work itself.

CONCLUSION

The internship at Technoguide Infosoft Pvt. Ltd. proved to be a highly enriching and transformative learning experience that significantly contributed to my technical as well as professional development. Throughout the internship period, I had the opportunity to work on real-time projects, which enabled me to understand how theoretical concepts are implemented in a practical industry environment. This experience helped bridge the gap between academic knowledge and real-world application.

Under the effective leadership of CEO Mr. Moulik Shah and with the consistent guidance of the coordinators, I was exposed to a wide range of practical tasks. These included frontend development using Bootstrap, backend programming with Python, database connectivity, CRUD operations, user authentication systems such as Sign-Up, Sign-In, and Admin Panel development, API integration for a Weather Application, version control through GitHub, website deployment, and creative poster designing using Canva. Each task strengthened my technical foundation and enhanced my analytical and problem-solving abilities.

The structured workflow, regular progress reviews, and constructive feedback sessions played a crucial role in refining my coding practices, improving design consistency, and enhancing my documentation skills. I gained a deeper understanding of writing clean and maintainable code, ensuring data accuracy, handling real-time API responses efficiently, and maintaining professionalism in project execution.

In conclusion, this internship not only improved my web development expertise but also instilled discipline, adaptability, and a better understanding of professional work culture. It has prepared me to confidently undertake advanced technical challenges in the future and stands as a significant milestone in my overall academic and career journey.
